

Architect Package Readiness — Is This Enough to Create the Video?

Generated 2026-04-16 18:08 UTC

Current Status — Enough to Start Video Production (Yes)

- You already have enough core architecture data to produce a strong, realistic modular plant video.
- Proceed now with video creation using the current reference set.

What You Already Have (Core Set)

- A1.01 Production Flow Diagram (bay sequence + process logic).
- A1.02 Overhead Crane & Conveyor Systems Plan.
- A1.03 Forklift & Pedestrian Circulation Diagram.
- A2.01 Front/Rear Elevations.
- A3.01 / A5.03 Section 1-1 (vertical datums and heights).

Optional Items to Request for Maximum Realism (Final-Final Accuracy)

- DWG versions of the same sheets (in addition to PDFs).
- Equipment block list with station names and exact positions.
- Light MEP routing detail by bay (electrical/plumbing/mechanical).
- One-page architect/ops-approved process narrative.
- Latest revision confirmation: "final for visualization use."

Decision Guidance

- If you need speed: start video production now with current set.
- If you need final technical precision: request the 5 optional items above and then finalize.
